

BURNISH CONCENTRATED LIQUID DETERGENT

BURNISH is a liquid alkaline detergent with controlled foam formation. Safe on all well-set painted and unpainted surfaces as well as on metals, many plastics like melamine, artificial leather, Plexiglas, etc. Easy to rinse and no residues or stripes deriving from water hardness.

BURNISH removes dirt, dust, protective oily film greases, light carbon residues, smog from transportation vehicles, working machine exterior structures, general containers, aluminum panels etc.

INSTRUCTIONS FOR USE

BURNISH has to be diluted with water and the concentration depends on the amount of dirt, its condition, the removal procedure and the working temperature.

Mix 0.5-2% of BURNISH in 1 liter of water for light cleaning like interior of transportation vehicles, or equipment carriers. For in-depth cleaning the concentration can increase to 10 - 20%. If applied with vapor cleaner, the dilution should be 0.5-1%.

BURNISH can be applied by rags or spray. After application wait 5-10 minutes depending on intensity of the dirt; if necessary brush the surface with appropriate tools. Rinse throughout, preferably with pressurized water.

STORAGE

The product has to be stored between +5°C and +35°C, away from incompatible substances, in cool and ventilated facilities.

SHELF LIFE AND PACKAGING

24 months , 10 kg/pail and 25 kg/pail

PRECAUTIONS

Please refer to the Material Safety Data Sheet.
